Remote operation

Remote Control Technology's Sidekick is now adapted for Hunter controllers.

It's a radio-operated way to control sprinklers, valves and pumps without going directly to the controller.

The Sidekick transmitter has a digital keypad with audible tactile response,

unique belt clip and flexible 8-inch whip antenna. Though it's FCC-approved, operators need no special license. The receiver operates 46 stations and has an automatic re-setting fuse. It automatically turns off a station after 20 minutes.

SideKick receiver upgrades are available for universal compatibility with all controllers.

Other features: audible low-battery indicator; waterproof; guaranteed to perform over long ranges without line-of-sight; 3-year warranty.
